FUTURE WATCH · ESG

AI's electricity bill to 2030

What the IEA forecasts, and what it means for your business

Swipe →

MarketCentaur

IEA FORECAST

The numbers

- Data centres: 485 TWh in 2025
- Around 950 TWh forecast for 2030
- About 3% of global electricity by then
- AI-focused data centres: use set to triple

MarketCentaur

IEA ANALYSIS

Two forces at once

→ Energy per AI task is falling fast

→ Video, reasoning and agent tasks use far more per query

→ So total demand still rises

MarketCentaur

OUR VIEW

What it means for you

01 AI use will show up in Scope 3 questions

02 Ask vendors for energy and emissions data

03 Match the model to the task

04 Count AI in your ESG reporting
